

# Applying RAG certified products? What about PFAS?

- You may still need to take measures regarding to other applicable legislation for this raw material or based on your duty of care.
- Exemption for PFAS testing, but it is advisable to have the raw material examined indicatively.

Soil products with RAG quality mark are unsuspected!

Mixed RAG soil product\* may be applied in the soil quality class Agriculture and Nature. Additional PFAS test is NOT required!

Mixed soil product\* may be applied in the soil quality class Residential areas. Provided that PFAS content of receiving soil is higher than that of the soil product.

Mixed soil product\* may not be applied

\* Mixed soil product under BRL 9335-4, such as tree sand and tree soil. Ask RHP about the application of soil products that are not covered by this BRL.
